Challenge

Businesses are plagued with technical debt and expected to transform data at an incredible pace driven by competition and customer demand. Traditional monolithic apps have been used as systems of record for decades and are cumbersome to maintain and update, driving risk into an organization. The key to a digital transformation is creating modern systems of engagement that are cloud native, which allow organizations to increase revenue, decrease time to value, and increase agility.

Evaluation & Modernization Plan

vCORE DevOps Engineers perform an in-depth analysis of the existing platforms, processes, and application stacks to assess overall alignment to your transformation strategy. A detailed report outlines what was discovered and recommends whether to maintain, migrate, or modernize your application to create a scalable and agile solution.

Services

- o Align custom legacy applications with company goals
- o Evaluate whether to re-host, re-platform, recode, retire, or replace
- o Improve functionality while lowering technical debt
- o Decrease delivery time, update execution, ease support burden

Benefits

- o Rapid response to evolving business requirements
- o Transformation of legacy systems into modern applications
- o Custom-built outcomes
- o Decreased support costs
- o Leveraging of internal resources
- o Retainment of internal talent
